Garden Fireplace 950

Capping x 1

Chimney blocks x 3

Top plate x 1

Gather front, back and sides x 4

Sides and back x 3

Sides and back x 3

Sides and back x 3

Base plate x 1

Log store component parts (supplied only if this option has been purchased)

2 sides, 1 back and 1 central block

Base plate x 1

The Garden Fire 950 comes complete with the following components:

- 1 bag of lip glue adhesive (for pumice components)
- 2 bags of render
- 1 log retainer kit (2 metal bars + 2 fixing brackets)
- 1 bag of Calderys fire brick mortar
- 1 set of pre-cut firebricks (see diagram below)

Fire brick diagram and parts for the 950 model (see page 8 for more details)

Log retainer kit (see page 10 for more details)

Important: If you are not building it straight away and plan to store it outside, you must keep the following items in a dry place indoors:

- Lip glue, Render, Firebrick mortar, Instruction manual.

These items are sensitive to moisture and must be protected from the elements. Failure to store them correctly may affect any future claim for replacement, as damage from incorrect storage is not covered.

Preparation

The Garden Fire needs to be built onto a firm foundation. It should not be built directly onto decking. Schiedel recommends that a minimum 100mm reinforced concrete base is used to support the structure.

A distance of 75mm should be left between the Garden Fire and any wooden or other combustible material.

Instructions - Optional log store (If this has not been purchased, go to page 4)

Create a suitable base. We recommend 100mm thick reinforced concrete. Bed the base plate using the supplied adhesive or mortar mix. Check every stage is level.

Mix lip glue jointing adhesive as per instructions on the bag. Apply 15-20mm beads using the supplied application bag as shown in the picture above.

Press one side block into place and apply lip glue into the slot as shown.

Press back panel into place and then add the remaining side panel.

Press the middle section down on to the adhesive and apply additional adhesive as shown.

Press the base plate of the firechest down on to the log store. Keep checking all is level and remove any excess lip glue.

Installation Instructions - Firechest (Step 1)

Bed the base plate using the supplied lip glue onto the log store or a suitable 100mm thick reinforced concrete base. Check every stage is level.

Press one side block into place and apply the lip glue into the slot as shown.

Press back panel into place and the other side block.

Apply the lip glue adhesive on top of the first layer.

Add a further 2 layers of side blocks and back panels applying lip glue adhesive between each layer and at each joint. In total there are 3 layers on top of the base plate, as per the image. (If the log store option is not being used, then this base plate will be bedded directly on to a suitable prepared base.

Step 1 Base, sides and back complete

Instructions - Gather unit (Step 2)

Apply lip glue to the top layer and then press the front and rear sections of the gather into place.

Apply lip glue to the joints on the sides of the front and rear panels of the gather.

Press the side panels of the gather into place.

Apply lip glue to the top of the gather unit and then press the top plate into position with the hole offset closer to the rear section of the gather. Ensure the top section is level. Clean off any excess glue

Step 2 Gather Unit section complete

At this stage the Garden Fire should resemble the image with the gather unit above the three rows of the firechest area, a base plate with the log store beneath the base plate (if the log store option is being used)

Instructions - Chimney blocks (Step 3)

Spread lip glue adhesive in the shape of the chimney block.

Press the first chimney block into place, checking it is in the correct position above the hole in the top plate.

Glue on the next two chimney blocks.

Glue on the capping.

Step 3 Blocks and capping complete

The fireplace is now complete with chimney blocks and capping. After the glue is touch dry, the rendering stage will commence.

This graphic shows a fireplace with the optional log store and base plate at the bottom.

Instructions - Rendering (Step 4)

Render plaster must be mixed, applied, and smoothed by a skilled professional. **Please note: As a heat-resistant material, it necessitates greater care and pressure during application compared to conventional plaster, which is typically smoother.**

Cracking and bubbling in the render often results from moisture being trapped behind it. This issue can stem from inadequate surface preparation, incorrect mixing ratios, application in unsuitable weather conditions (such as high humidity), or applying the render to a damp surface. When moisture is trapped, it can expand and form bubbles as it attempts to escape. Key contributors to bubbling on concrete surfaces include an excessive amount of water in the render mix. Overly watery mixtures can weaken the bond and lead to moisture entrapment, resulting in bubbling during the drying process.

Additionally, insufficient substrate preparation, such as failing to clean or prime the concrete surface before applying the render, can result in poor adhesion and the formation of air pockets.

Render plaster is intended for a single coat application; if additional coats are necessary, more render must be purchased.

Burn off the fibres on external surface before rendering.

Mix the render as per the instructions on the bag.

Render the surface areas.

Ensure the edges are smooth and wait to dry.

The finished model, prior to adding firebricks and the log retainer.

Garden Fireplace firebricks guide

950 model

Important. Please DO NOT glue the base bricks highlighted in the green area. This is to prevent cracking due to thermal expansion. Normally, the ash from the burnt material will automatically fill the gaps for these loose base bricks and allow for expansion.

The finished firechest must be lined with firebricks that are at least 25mm thick on the sides and 50mm thick on the back and bottom. The firebricks should be either butt jointed or pointed and adhered to the pumice elements using firebrick mortar, with the exception of the base firebricks, which should be placed loosely.

The front row of the base bricks may be secured in position with adhesive. To ensure proper adhesion, thoroughly wet the pumice and allow sufficient time for the water to be absorbed. When preparing the firebricks, submerge one in a bucket of water until the surfaces are moist but not dripping.

Follow the mixing instructions for the firebrick mortar and apply a layer of 2-3mm thickness before positioning the firebricks onto the pumice.

Brick	L	W	D	Brick	L	W	D	Brick	L	W	D
A	230	114	50	G	71	114	50	M	156	114	25

								S	156	114	25

Sizes in mm

Note for all models

8mm gap between bricks.

Bedded on 1-3mm thick firebrick mortar

Firebricks to be glued on and pointed with the Calderys firebrick mortar as per enclosed instructions

Instructions - Firebricks (Step 5)

Mortar bag - Used for gluing on firebricks and pointing in. Mix as per instructions on the bag

Bed the firebricks on to a 3mm layer of firebrick mortar. Use the tables on the previous page as a guide.

Complete the bottom layer of firebricks, then fasten the rear firebricks in place using the firebrick mortar. Use a tile spacer to keep an 8mm gap.

Once the bottom and rear firebricks are in place, fasten the side bricks in position using the firebrick mortar. Use a tile spacer to keep an 8mm gap.

Use the mortar mix to point up the joints between the firebricks once they are all in position.

Clean off excess mortar.

Instructions - Log retainer (Step 6)

Drill 2 x 12mm diameter holes in the front row of the firebricks. Push log retainer holders in place.

Then push fit the log retainer bars into the slots.

Optional extras - raincap (if purchased)

Locate the etching on the top of the Raincap and loosely fix legs (on the underside) in position according to etching marked on each one.

When the capping is being glued into place, slide the wave legs into the lip glue joint (as per pic).

All are now positioned

Tighten the bolts on the Raincap

After completion

Once build and rendering is complete, please do not use for at least 72 hours after completion.

On first use, always light a small fire first and increase the size of the fire once the firechest has fully dried out. Only use dried and seasoned wood for the fire. Do not burn plastic or waste products.

Guarantee

INTRODUCTION

We are confident in our products and so offer you (the owner) a generous guarantee in relation to the Garden Fireplace.

Provided that you comply in full with your responsibilities (below) and subject to the Small Print (below), we guarantee to you that the fireplace will be free from defects on delivery to you via pallet.

Any blocks or firebricks which are cracked or damaged at the time of delivery will be replaced free of charge.

This guarantee does not cover any major impact to the fireplace (such as wear and tear, wind damage) once the item has been constructed and rendered.

As the fireplace is an outdoor product, standard wear and tear will occur and any structural damage would have to be investigated. In the unlikely event that the fireplace becomes defective during the guarantee period, we will provide replacement component parts and render material free of charge.

YOUR RESPONSIBILITIES

To benefit from our guarantee, this product will be registered to the address where we delivered it. Please inform us if the fireplace was installed elsewhere.

HOW TO CLAIM UNDER YOUR GUARANTEE

To claim under your guarantee, please email us at sales.uk@schiedel.com. You will be asked to provide proof that you have complied in full with the terms of usage of the fireplace and that only dried and seasoned firewood has been used as a fuel.

There are a range of optional accessories available for this Garden Fireplace.

Please contact us or your distributor for more details and pricing.

Code	Optional extras
------	-----------------

157837	Log Storage for 950
--------	---------------------

130708	Additional height blocks for 950
