

BBQ Grill
500x300mm

Extra Side Log
Store If Required

We recommend a minimum 100mm thick reinforced concrete slab to bed the garden fireplace onto, size should be at least 150mm wider than the Garden fire on all 4 sides

All the pumice components to be glued with lip glue using the application bags provided. Mix the lip glue as per instructions on the bag and fill application bag. Cut a 15-20mm piece off the end of the bag to create 15-20mm beads of lip glue when squeezed, apply to the pumice block surface as per sample picture. Use a spirit level to check and level as you go. The finished lip glue joints should be 2-3mm thick.

The external surface of the fireplace can be coated with the enclosed render mix supplied and or painted with breathable waterproof masonry paint. (We recommend burning off the fibres before rendering)

Please note 100mm distance is required to combustible material
