

SCHIEDEL PROTECT BOX

Simple Safe Solutions

Engineered to meet the key challenges of modern houses...

- Ever more air tight construction
- Increasing depth of loft insulation

How?

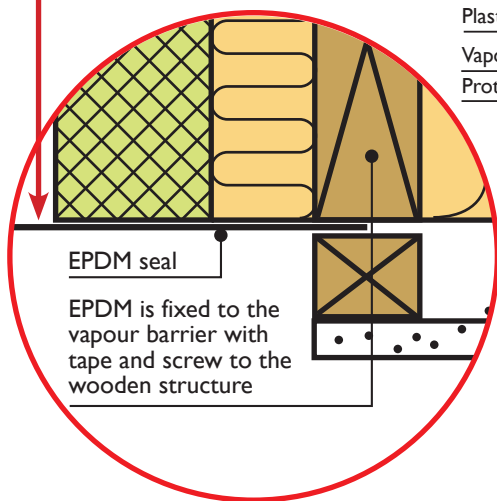

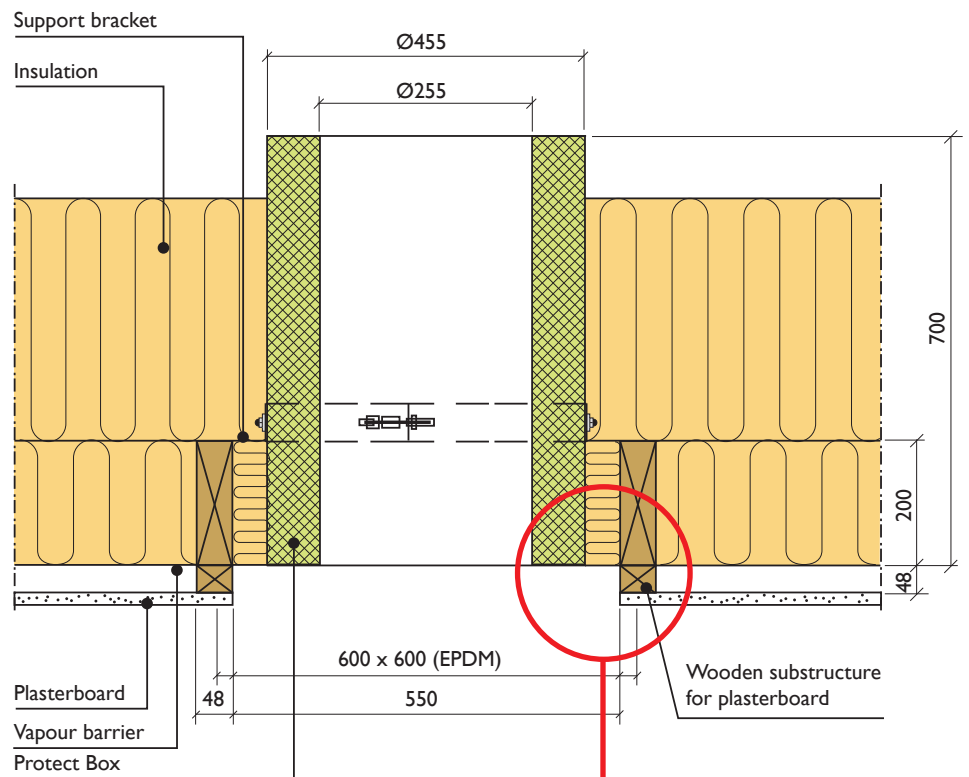

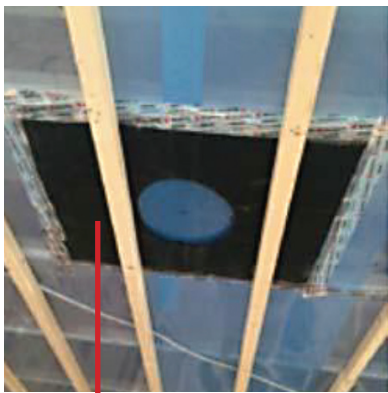

1. Designed to meet blower door test.
2. Constructed using a high temperature resistant Rockwool insulation with an aluminium laminate outer surface to give **zero** distance to combustibles.
3. An EPDM kit is available to allow for the chimney to pass through an air tight membrane at ceiling level in a cold roof construction or at roof level in a warm roof construction.
4. Standard height 700 mm to meet new roof insulation requirements.

Schiedel Protect Box is the proven solution to safeguard distance to combustible materials in low energy and passive houses.

	SAP Code	Price
Protect Box	121342	£107.94
EPDM Seal	136939	£16.22
